

## Redesign the Misleading Colored Chart

R.No: 13    Reg. No: 192424085    Name: H D N PRAHARSHINI

*Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.*

### Chart 1

#### 1. What is this chart trying to show?

It shows the **attendance percentage of students in different groups/classes**.

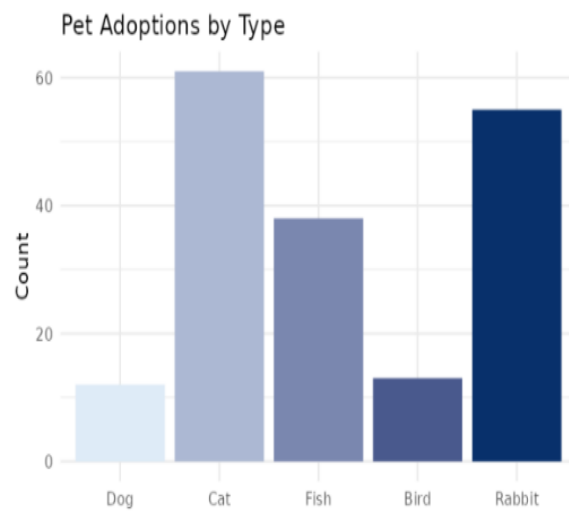

#### 2. What's wrong with the color choice?

The colors are **different and unrelated**, which can make the viewer think the colors represent different categories or meanings. The chart is only comparing attendance values.

#### 3. Propose a better color scheme (describe it in words):

Use **one consistent color for all bars**, such as blue. A darker shade can be used for higher attendance if needed.

Chart 2

**1. What is this chart trying to show?**

It shows the **number of adoptions for different types of pets**, such as Dog, Cat, Fish, Bird, and Rabbit.

**2. What's wrong with the color choice?**

The colors are **too varied and inconsistent**. They may suggest that some pet types have a special meaning or importance when the chart is simply comparing adoption numbers.

**3. Propose a better color scheme (describe it in words):**

Use **the same color for all pet types**, such as a single blue shade. If highlighting one particular pet type is necessary, use one contrasting color only for that bar.
